Practical Industrial Process Gamification

Little to no industrial field experience is required for this course. All the basic information you need is provided to get you started such that you need not even be an engineer to utilize it.

Course Content

- Introduce you to practical industrial process control by using the concept of gamification

- Help you identify relationships of the up, mid and down streams of the petroleum industry with the three (3) gamified petroleum industry applications provided.

- Enable you to easily understand the operations of key components across the petroleum industry.

- Enable you handle an assumed control system ranging from the transducer, controller and actuator while receiving immediate feedback based on your actions.

- Expose you to critical soft and technical skills required by the petroleum industry.

- Connect your learning to real-world situation while testing your critical reasoning when challenged.

- Teach you how to systematically approach industrial challenges one step at a time.

- Helps you improve interaction and collaboration with your peers.

- Improve your employability status not just in the industrial sector covered but generally.

This Course For

- Designers

- Petroleum Engineers
- Refiners

Course Duration

2 Days
